 Nickname: **"Empire State"**  
 State motto: **"Excelsior" ("Ever Upward")**  
 Governor: **Kathy Hochul (D)**  
 U.S. Senators: **Chuck Schumer (D),**  
**Kirsten Gillibrand (D)**

## How will your state vote?

Predicting a vote is a challenging task. Political researchers have different opinions on how to predict an election outcome. Different formulas and methods are used, however none is perfect. Each prediction is a snapshot of the voters' opinion at a certain point in time. But with election issues and current events changing so fast, it is quite a challenge to have an accurate prediction of how the election will turn out. In the 2020 election, most political pundits and polls before Election Day accurately estimated that Democratic candidate Joe Biden would receive more votes than the Republican candidate and former President Donald J. Trump. However, Biden's victory in the Electoral College was narrower than predicted because the polls overstated Biden's support relative to Trump.

What are the most common predictors to determine how citizens will vote? Socio-economic factors are among the most important ones. They include, but are not limited to, citizens' education, income, and ethnicity. While these are often mentioned as decisive, others are important to consider as well. For example, many Americans cast their vote based on a single issue like health care, women's reproductive rights, the economy, or the environment. These voters choose their preferred candidate based on the issue most important to their identity, their social network, or personal biography, for example religious affiliation, ideology, or health. Americans also often cast their vote in a local context and are influenced by political and social issues affecting their own state. Finally, calculating voter turnout is key to an accurate prediction.

## Some key variables for predicting the election outcome

### Voting history

*How have people in the state voted in the past? Is the state solidly red, blue, or purple? What is the expected turnout?*

### Ethnicity

*What ethnic group does a citizen belong to? What is the ethnic make-up of the state?*

### Religion

*How important is religion to the citizens? How often do they pray or attend worship service?*

### Economy

*What's the current economic situation in the state? How many citizens live in poverty? How many are without a job?*

### Income inequality

*How wide is the gap between wealthy and poor people? How much income does the top 1% in the state take home?*

### Education

*How many people graduate from high school in your state? How many have a college degree?*

## Voting history <sup>[2]</sup>

**New York, one of the 13 original colonies, joined the Union in July 1788.**

In the 1810 census, New York became the nation's most populous state, and had the most electoral votes from the 1812 election until the 1972 election, when it relinquished that distinction to California. Texas surpassed New York in those numbers in 2004. Like many other northeastern states, New York's electoral clout has diminished in recent years. New York has been primarily a "blue" state ever since the Great Depression, only siding with a losing Republican when it chose its then-current governor Thomas E. Dewey over Harry S. Truman in 1948. It has voted Democratic in the last nine elections, six of those by a 20% margin. That includes 2020 as Joe Biden defeated Donald Trump by 23%.

### Election results in New York (2004–2020): <sup>[2]</sup>

### Voter turnout 2020:

## Ethnicity <sup>[3]</sup>

(U.S. average in grey)

## Religion <sup>[4]</sup>

**NY is the 43<sup>rd</sup> most religious state overall**

**43% of adults in NY are "highly religious," based on an overall index**
